

Amendments to the Claims:

This listing of claim 1 will replace all prior versions, and listings of claims in the application:

Listing of Claims:

Claim 1. (currently amended) An ink-jet recording material which comprises a light transmitting support, at least one ink-receptive layer provided on one surface of the support and at least one back-coating layer provided on the opposite surface of the support, wherein

at least one of the back-coating layers contains inorganic fine particles having an average particle size of a primary particle of 5 to 50 nm and a binder, a void ratio of the layer is 70% by volume or less, and the light transmitting support has opacity regulated by JIS P8138A method of 60% or less,

the ink-receptive layer contains inorganic fine particles having an average particle size of a primary particle of 5 to 30 nm, which are at least one selected from the group consisting of fumed silica, alumina and alumina hydrate, and a hydrophilic binder,
and

a weight ratio of the hydrophilic binder in the ink-receptive layer based on the amount of the inorganic fine particles is 5 to 30% by weight.
